- A. Mastered
B. Not Mastered

Answer: A

Explanation:

The LVM system organizes hard disks into Logical Volume (LV) groups. Essentially, physical hard disk partitions (or possibly RAID arrays) are set up in a bunch of equal sized chunks known as Physical Extents (PE). As there are several other concepts associated with the LVM system, let's start with some basic definitions: Physical Volume (PV) is the standard partition that you add to the LVM mix. Normally, a physical volume is a standard primary or logical partition. It can also be a RAID array. Physical Extent (PE) is a chunk of disk space. Every PV is divided into a number of equal sized PEs. Every PE in a LV group is the same size. Different LV groups

can have different sized PEs.

Logical Extent (LE) is also a chunk of disk space. Every LE is mapped to a specific PE.

Logical Volume (LV) is composed of a group of LEs. You can mount a file system such as /home and /var on an LV.

Volume Group (VG) is composed of a group of LVs. It is the organizational group for LVM. Most of the commands that you'll use apply to a specific VG.

- ▶ Verify the size of Logical Volume: `lvdisplay /dev/vg0/lv1`
- ▶ Verify the Size on mounted directory: `df -h` or `df -h` mounted directory name
- ▶ Use: `lvextend -L+400M /dev/vg0/lv1`
- ▶ `ext2online -d /dev/vg0/lv1` to bring extended size online.
- ▶ Again Verify using `lvdisplay` and `df -h` command.

Make sure that when NIS user login in your system automatically mount the home directory. Home directory is separately shared on server /rhome/stationx/ where x is your Station number.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

- ▶ use the `authconfig --nisserver=<NIS SERVER> --nisdomain=<NIS DOMAIN> -- update`
Example: `authconfig --nisserver=192.168.0.254 --nisdomain=RHCE --update` or `system-config-authentication`
- ▶ Click on Enable NIS
- ▶ Type the NIS Domain: RHCE
- ▶ Type Server 192.168.0.254 then click on next and ok
- ▶ You will get a ok message.
- ▶ Create a Directory /rhome/stationx where x is your station number.
- ▶ `vi /etc/auto.master` and write at the end of file /rhome/stationx/etc/auto.home --timeout=60
- ▶ `vi /etc/auto.home` and write

* `-rw,soft,intr 192.168.0.254:/rhome/stationx/&`

Note: please specify your station number in the place of x.

- ▶ Service autofs restart
- ▶ Login as the nisuser2001 or nisuser2002 on another terminal will be Success. According to question, RHCE domain is already configured. We have to make a client of RHCE domain and automatically mount the home directory on your system. To make a member of domain, we use the `authconfig` with option or `system-config authentication` command. There are lots of authentication server i.e NIS, LDAB, SMB etc. NIS is a RPC related Services, no need to configure the DNS, we should specify the NIS server address.
Here Automount feature is available. When user tried to login, home directory will automatically mount. The automount service used the /etc/auto.master file. On /etc/auto.master file we specified the mount point the configuration file for mount point.
